Research with group of students with the equipment of the PhDICTKES project

03/06/2022

A group of 7 students participated in the research that lasted more than three months under the mentorship of Hasani on two main topics: Analysis of the design of websites of public universities in Kosovo (with Pupil Labs) and the establishment of Libelium Smart Agriculture and Smart City data collection centers, these devices were funded by the ERASMUS + PhDICTKES project where the University is a partner.

The results of the research are described in the scientific paper which will be sent for future publication and also the collected data are used for research by students in Master study to prepare the master thesis.
